Figures and tables / xv
Acknowledgments / xx
Acknowledgments to First Edition / xxiii

Introduction / I-1

Network systems / I-4
Protocols—What are they? / I-4
AppleTalk / I-4
 Why did we design it? / I-5
 Key goals of the AppleTalk architecture / I-6
The AppleTalk network system / I-8
 AppleTalk connectivity / I-9
 AppleTalk end-user services / I-15
AppleTalk protocol architecture and the ISO-OSI reference model / I-20
AppleTalk Phase 2 / I-24
Thoughts of the future / I-25
 Scope / I-25
 Reach / I-25
About Inside AppleTalk / I-26
Typographic and graphic conventions used in this book / I-27
Where to go for more information / I-28

Part I Physical and Data Links

1 LocalTalk Link Access Protocol / 1-1

Link access control / 1-3

Node addressing / 1-3

Node IDs / 1-4

Dynamic node ID assignment / 1-4

Data transmission and reception / 1-6

LLAP packet / 1-6

LLAP frame / 1-9

Data packet transmission / 1-10

Carrier sensing and synchronization / 1-10

Transmission dialogs / 1-11

Directed data packet transmission / 1-14

Broadcast data packet transmission / 1-15

Packet reception / 1-15

2 AppleTalk Address Resolution Protocol / 2-1

Protocol families and stacks / 2-3

Protocol and hardware addresses / 2-3

Address resolution / 2-3

AARP services / 2-5

AARP operation / 2-6

Address mapping / 2-7

Dynamic protocol address assignment / 2-8

Retransmission of AARP packets / 2-9

Filtering incoming packets / 2-9

AMT entry aging / 2-10

AARP packet formats / 2-11

3 EtherTalk and TokenTalk Link Access Protocols / 3-1

802.2 / 3-3

ELAP packet format / 3-5

TLAP packet format / 3-6

Address mapping in ELAP and TLAP / 3-7

 Use of AARP by ELAP and TLAP / 3-8

 AARP specifics for ELAP and TLAP / 3-9

 Zone multicast addresses used by ELAP and TLAP / 3-10

AppleTalk AARP packet formats on Ethernet and token ring / 3-11

Part II End-to-End Data Flow

4 Datagram Delivery Protocol / 4-1

Internet routers / 4-5

Sockets and socket identification / 4-5

Network numbers and a node's AppleTalk address / 4-6

Special DDP node IDs / 4-6

AppleTalk node address acquisition / 4-7

 Node address acquisition on nonextended networks / 4-8

 Node address acquisition on extended networks / 4-8

DDP type field / 4-9

Socket listeners / 4-10

DDP interface / 4-10

 Opening a statically assigned socket / 4-11

 Opening a dynamically assigned socket / 4-12

 Closing a socket / 4-12

 Sending a datagram / 4-12

 Datagram reception by the socket listener / 4-13

DDP internal algorithm / 4-13

DDP packet format / 4-13

 Short and extended headers / 4-14

 DDP checksum computation / 4-17

 Hop counts / 4-17

- DDP routing algorithm / 4-18
 - Optional "best router" forwarding algorithm / 4-20
- Sockets and use of name binding / 4-21
- Network number equivalence / 4-21

5 Routing Table Maintenance Protocol / 5-1

- Internet routers / 5-4
 - Local routers / 5-4
 - Half routers / 5-4
 - Backbone routers / 5-4
- Router model / 5-6
- Internet topologies / 5-7
- Routing tables / 5-8
- Routing table maintenance / 5-10
 - Reducing RTMP packet size / 5-11
 - Aging of routing table entries / 5-12
 - Validity and send-RTMP timers / 5-13
- RTMP Data packet format / 5-13
 - Sender's network number / 5-15
 - Sender's node ID / 5-15
 - Version number indicator / 5-15
 - Routing tuples / 5-16
- Assignment of network number ranges / 5-16
- RTMP and nonrouter nodes / 5-17
 - Nodes on nonextended networks / 5-17
 - Nodes on extended networks / 5-19
- RTMP Route Data Requests / 5-20
- RTMP table initialization and maintenance algorithms / 5-21
 - Initialization / 5-21
 - Maintenance / 5-21
 - Tuple matching definitions / 5-25
- RTMP routing algorithm / 5-25

6 AppleTalk Echo Protocol / 6-1

Part III Named Entities

7 Name Binding Protocol / 7-1

- Network-visible entities / 7-4
- Entity names / 7-4
- Name binding / 7-5
 - Names directory and names tables / 7-6
 - Aliases and enumerators / 7-6
 - Names information socket / 7-7
- Name binding services / 7-7
 - Name registration / 7-7
 - Name deletion / 7-8
 - Name lookup / 7-8
 - Name confirmation / 7-8
- NBP on a single network / 7-9
- NBP on an internet / 7-10
 - Zones / 7-10
 - Name lookup on an internet / 7-10
- NBP interface / 7-11
 - Registering a name / 7-12
 - Removing a name / 7-12
 - Looking up a name / 7-13
 - Confirming a name / 7-13
 - NBP packet formats / 7-14
 - Function / 7-15
 - Tuple count / 7-15
 - NBP ID / 7-15
 - NBP tuple / 7-15

8 Zone Information Protocol / 8-1

- ZIP services / 8-4
- Network-to-zone-name mapping / 8-4
 - Zone information table / 8-4
 - Zone information socket: ZIP Queries and Replies / 8-5
 - ZIT maintenance / 8-5

Zone name listing /	8-7
Zone name acquisition /	8-9
Verifying a saved zone name /	8-9
Choosing a new zone name /	8-10
Zone multicasting /	8-10
Aging the zone name /	8-10
Packet formats /	8-11
ZIP Query and Reply /	8-11
ZIP ATP Requests /	8-13
ZIP GetNetInfo Request and Reply /	8-16
Zone multicast address computation /	8-18
NBP routing in IRs /	8-18
Generating FwdReq packets /	8-19
Converting FwdReqs to LkUps /	8-19
Zones list assignment /	8-20
Zones list changing /	8-21
Changing zones lists in routers /	8-21
Changing zone names in nodes /	8-22
Timer values /	8-24

Part IV Reliable Data Delivery

9 AppleTalk Transaction Protocol / 9-1

Transactions /	9-3
At-least-once (ALO) transactions /	9-5
Exactly-once (XO) transactions /	9-6
Multipacket responses /	9-9
Transaction identifiers /	9-9
ATP bitmap/sequence number /	9-10

Responders with limited buffer space / 9-12

ATP packet format / 9-13

ATP interface / 9-16

 Sending a request / 9-17

 Opening a responding socket / 9-18

 Closing a responding socket / 9-19

 Receiving a request / 9-19

 Sending a response / 9-20

ATP state model / 9-21

 ATP requester / 9-22

 ATP responder / 9-24

Optional ATP interface calls / 9-26

 Releasing a RspCB / 9-26

 Releasing a TCB / 9-26

Wraparound and generation of TIDs / 9-27

10 Printer Access Protocol / 10-1

PAP services / 10-4

The protocol / 10-5

 Connection establishment phase / 10-7

 Data transfer phase / 10-9

 Duplicate filtration / 10-11

 Connection termination phase / 10-11

 Status gathering / 10-12

PAP packet formats / 10-12

PAP function and result values / 10-16

PAP client interface / 10-16

PAP specifications for the Apple LaserWriter printer / 10-21

11 AppleTalk Session Protocol / 11-1

What ASP does / 11-4

What ASP does not do / 11-4

ASP services and features / 11-5

Opening and closing sessions / 11-6

Session maintenance / 11-9

Commands on an open session / 11-10

Sequencing and duplicate filtration / 11-14

Getting service status information / 11-15

ASP client interface / 11-16

Server-end calls / 11-16

Workstation-end calls / 11-23

Packet formats and algorithms / 11-27

Opening a session / 11-27

Getting server status / 11-29

Sending a command request / 11-30

Sending a write request / 11-32

Maintaining the session / 11-35

Sending an attention request / 11-36

Closing a session / 11-36

Checking for reply size errors / 11-37

Timeouts and retry counts / 11-38

SPFunction values / 11-39

12 AppleTalk Data Stream Protocol / 12-1

ADSP services / 12-4

Connections / 12-4

Connection states / 12-5

Half-open connections and the connection timer / 12-5

Connection identifiers / 12-6

- Data flow / 12-6
 - Sequence numbers / 12-7
 - Error recovery and acknowledgments / 12-7
 - Flow control and windows / 12-8
 - ADSP messages / 12-9
 - Forward resets / 12-9
 - Summary of sequencing variables / 12-10
- Packet format / 12-12
- Control packets / 12-14
- Data-flow examples / 12-15
- Attention messages / 12-19
- Connection opening / 12-22
 - Connection-opening dialog / 12-24
 - Open-connection Control packet format / 12-27
 - Error recovery in the connection-opening dialog / 12-30
 - Connection opening outside of ADSP / 12-34
 - Connection-listening sockets and servers / 12-35
 - Connection-opening filters / 12-36
- Connection closing / 12-38

Part V End-User Services

13 AppleTalk Filing Protocol / 13-1

- File system structure / 13-7
 - File server / 13-8
 - Volumes / 13-9
 - Catalog node names / 13-13
 - Directories and files / 13-15
 - File forks / 13-22
- Designating a path to a CNode / 13-23
- AFP login / 13-27
- File server security / 13-28
 - User authentication methods / 13-28
 - Volume passwords / 13-30
 - Directory access control / 13-31

File sharing modes /	13-35
Access modes and deny modes /	13-35
Synchronization rules /	13-36
Desktop database /	13-37
AFP's use of ASP /	13-38
An overview of AFP calls /	13-39
Server calls /	13-40
Volume calls /	13-41
Directory calls /	13-42
File calls /	13-43
Combined directory-file calls /	13-43
Fork calls /	13-44
Desktop database calls /	13-45
AFP calls /	13-46

14 Print Spooling Architecture / 14-1

Printing without a spooler /	14-4
Benefits of printing with a spooler /	14-5
Background spoolers versus spooler/servers /	14-6
Impact of the Macintosh on printing /	14-6
Printing without a spooler /	14-7
Printing with a spooler/server /	14-9
Controlling printer access /	14-10
User authentication dialog /	14-12
Direct passthrough /	14-14
Spooler/server queue management /	14-15
About document structuring conventions /	14-18
About PostScript document files /	14-18
About PostScript print jobs /	14-19
Comment format /	14-20
Syntax conventions /	14-21
Comments in documents /	14-22
Prologue and script /	14-22
Pages /	14-23
Line length /	14-23

Structure comments /	14-23
Header comments /	14-25
Body comments /	14-28
Resource comments /	14-32
Conventions for using resource comments /	14-32
Definitions /	14-33
Query comments /	14-34
Conventions for using query comments /	14-35
Spooler responsibilities /	14-35
Definitions /	14-36
Sample print streams /	14-41

Appendix A LocalTalk Hardware Specifications / A-1

LocalTalk electrical characteristics /	A-2
Bit encoding and decoding /	A-2
Signal transmission and reception /	A-3
Carrier sense /	A-3
Electrical/mechanical specification /	A-3
Connection module /	A-4
LocalTalk connector /	A-5
Cable connection /	A-5
Transformer specifications	A-5
Environmental conditions /	A-7
Mechanical strength and workmanship /	A-8

Appendix B LLAP Access Control Algorithms / B-1

Assumptions /	B-2
Global constants, types, and variables /	B-2
Hardware interface declarations /	B-4
Interface procedures and functions /	B-5
InitializeLLAP procedure /	B-6
AcquireAddress procedure /	B-7
TransmitPacket function /	B-8
TransmitLinkMgmt function /	B-8

TransmitFrame procedure / B-14
ReceivePacket procedure / B-15
ReceiveLinkMgmt function / B-15
ReceiveFrame function / B-17
Miscellaneous functions / B-19
SCC implementation / B-20
CRC-CCITT calculation / B-22

Appendix C AppleTalk Parameters / C-1

LLAP parameters / C-2
AARP parameters / C-4
EtherTalk and TokenTalk parameters / C-4
DDP parameters / C-6
RTMP parameters / C-8
AEP parameters / C-9
NBP parameters / C-9
ZIP parameters / C-10
ATP parameters / C-10
PAP parameters / C-11
ASP parameters / C-12
ADSP parameters / C-13
AFP parameters / C-13

Appendix D Character Codes / D-1

Glossary / G-1

Index / Index-1
