# Contents

<b>1</b>	<b>The Basics of Credit Risk Management</b>	<b>15</b>
1.1	Expected Loss . . . . .	16
1.1.1	The Default Probability . . . . .	17
1.1.2	The Exposure at Default . . . . .	24
1.1.3	The Loss Given Default . . . . .	27
1.2	Unexpected Loss . . . . .	28
1.2.1	Economic Capital . . . . .	32
1.2.2	The Loss Distribution . . . . .	33
1.2.3	Modeling Correlations by Means of Factor Models . . . . .	41
1.3	Regulatory Capital and the Basel Initiative . . . . .	51
<b>2</b>	<b>Modeling Correlated Defaults</b>	<b>55</b>
2.1	The Bernoulli Model . . . . .	56
2.1.1	A General Bernoulli Mixture Model . . . . .	58
2.1.2	Uniform Default Probability and Uniform Correlation . . . . .	60
2.2	The Poisson Model . . . . .	62
2.2.1	A General Poisson Mixture Model . . . . .	63
2.2.2	Uniform Default Intensity and Uniform Correlation . . . . .	63
2.3	Bernoulli Versus Poisson Mixture . . . . .	65
2.4	An Overview of Today's Industry Models . . . . .	66
2.4.1	CreditMetrics <sup>TM</sup> and the KMV-Model . . . . .	68
2.4.2	CreditRisk <sup>+</sup> . . . . .	71
2.4.3	CreditPortfolioView . . . . .	75
2.4.4	Dynamic Intensity Models . . . . .	81
2.5	One-Factor/Sector Models . . . . .	83
2.5.1	The CreditMetrics <sup>TM</sup> /KMV One-Factor Model . . . . .	83
2.5.2	The CreditRisk <sup>+</sup> One-Sector Model . . . . .	99
2.5.3	Comparison of One-Factor and One-Sector Models . . . . .	101
2.6	Loss Distributions by Means of Copula Functions . . . . .	103
2.6.1	Copulas: Variations of a Scheme . . . . .	105
2.7	Working Example: Estimation of Asset Correlations . . . . .	113
<b>3</b>	<b>Asset Value Models</b>	<b>123</b>
3.1	Introduction and a Small Guide to the Literature . . . . .	123
3.2	A Few Words about Calls and Puts . . . . .	124
3.2.1	Geometric Brownian Motion . . . . .	126
3.2.2	Put and Call Options . . . . .	127

3.3	Merton's Asset Value Model . . . . .	133
3.3.1	Capital Structure: Option-Theoretic Approach . . . . .	134
3.3.2	Asset from Equity Values . . . . .	138
3.4	Transforming Equity into Asset Values: A Working Approach . . . . .	141
3.4.1	Itô's Formula "Light" . . . . .	141
3.4.2	Black-Scholes Partial Differential Equation . . . . .	143
<b>4</b>	<b>The CreditRisk<sup>+</sup> Model</b>	<b>149</b>
4.1	The Modeling Framework of CreditRisk <sup>+</sup> . . . . .	150
4.2	Construction Step 1: Independent Obligor . . . . .	153
4.3	Construction Step 2: Sector Model . . . . .	154
4.3.1	Sector Default Distribution . . . . .	156
4.3.2	Sector Compound Distribution . . . . .	160
4.3.3	Sector Convolution . . . . .	163
<b>5</b>	<b>Alternative Risk Measures and Capital Allocation</b>	<b>165</b>
5.1	Coherent Risk Measures and Conditional Shortfall . . . . .	166
5.2	Contributory Capital . . . . .	171
5.2.1	Variance/Covariance Approach . . . . .	172
5.2.2	Capital Allocation w.r.t. Value-at-Risk . . . . .	174
5.2.3	Capital Allocations w.r.t. Expected Shortfall . . . . .	175
5.2.4	A Simulation Study . . . . .	177
<b>6</b>	<b>Term Structure of Default Probability</b>	<b>183</b>
6.1	Survival Function and Hazard Rate . . . . .	183
6.2	Risk-neutral vs. Actual Default Probabilities . . . . .	186
6.3	Term Structure Based on Historical Default Information . . . . .	188
6.3.1	Exponential Term Structure . . . . .	188
6.3.2	Direct Calibration of Multi-Year Default Probabilities . . . . .	189
6.3.3	Migration Technique and Q-Matrices . . . . .	194
6.4	Term Structure Based on Market Spreads . . . . .	205
<b>7</b>	<b>Credit Derivatives</b>	<b>211</b>
7.1	Total Return Swaps . . . . .	212
7.2	Credit Default Products . . . . .	214
7.3	Basket Credit Derivatives . . . . .	218
7.4	Credit Spread Products . . . . .	229
7.5	Credit-linked Notes . . . . .	232
<b>8</b>	<b>Collateralized Debt Obligations</b>	<b>237</b>
8.1	Introduction to Collateralized Debt Obligations . . . . .	237
8.1.1	Typical Cash Flow CDO Structure . . . . .	240
8.1.2	Typical Synthetic CLO Structure . . . . .	249
8.2	Different Roles of Banks in the CDO Market . . . . .	253
8.2.1	The Originator's Point of View . . . . .	253

		11
	8.2.2 The Investor's Point of View . . . . .	260
8.3	CDOs from the Modeling Point of View . . . . .	264
	8.3.1 Multi-Step Models . . . . .	267
	8.3.2 Correlated Default Time Models . . . . .	268
	8.3.3 Stochastic Default Intensity Models . . . . .	269
8.4	Rating Agency Models: Moody's BET . . . . .	271
8.5	Conclusion . . . . .	279
8.6	Some Remarks on the Literature . . . . .	280
