<b>Foreword</b>	<b>xix</b>
<b>Motivation and Scope of this Book: A Quick Guided Tour</b>	<b>xxi</b>
<b>PART I INTEREST RATE RISK</b>	<b>1</b>
Introduction to Part I	3
<b>1 The Repricing Gap Model</b>	<b>9</b>
1.1 Introduction	9
1.2 The gap concept	9
1.3 The maturity-adjusted gap	12
1.4 Marginal and cumulative gaps	15
1.5 The limitations of the repricing gap model	19
1.6 Some possible solutions	20
1.6.1 Non-uniform rate changes: the standardized gap	20
1.6.2 Changes in rates of on-demand instruments	23
1.6.3 Price and quantity interaction	24
1.6.4 Effects on the value of assets and liabilities	25
Selected Questions and Exercises	25
Appendix 1A The Term Structure of Interest Rates	28
Appendix 1B Forward Rates	32
<b>2 The Duration Gap Model</b>	<b>35</b>
2.1 Introduction	35
2.2 Towards mark-to-market accounting	35
2.3 The duration of financial instruments	39
2.3.1 Duration as a weighted average of maturities	39
2.3.2 Duration as an indicator of sensitivity to interest rates changes	40
2.3.3 The properties of duration	42
2.4 Estimating the duration gap	42
2.5 Problems of the duration gap model	45
Selected Questions and Exercises	47
Appendix 2A The Limits of Duration	49

<b>3</b>	<b>Models Based on Cash-Flow Mapping</b>	<b>57</b>
3.1	Introduction	57
3.2	The objectives of cash-flow mapping and term structure	57
3.3	Choosing the vertices of the term structure	58
3.4	Techniques based on discrete intervals	59
3.4.1	The duration intervals method	59
3.4.2	The modified residual life method	60
3.4.3	The Basel Committee Method	61
3.5	Clumping	64
3.5.1	Structure of the methodology	64
3.5.2	An example	65
3.5.3	Clumping on the basis of price volatility	67
3.6	Concluding comments	68
	Selected Questions and Exercises	69
	Appendix 3A Estimating the Zero-Coupon Curve	71
<b>4</b>	<b>Internal Transfer Rates</b>	<b>77</b>
4.1	Introduction	77
4.2	Building an ITR system: a simplified example	77
4.3	Single and multiple ITRs	79
4.4	Setting internal interest transfer rates	84
4.4.1	ITRs for fixed-rate transactions	84
4.4.2	ITRs for floating-rate transactions	85
4.4.3	ITRs for transactions indexed at "non-market" rates	85
4.5	ITRs for transactions with embedded options	88
4.5.1	Option to convert from fixed to floating rate	88
4.5.2	Floating rate loan subject to a cap	89
4.5.3	Floating rate loan subject to a floor	90
4.5.4	Floating rate loan subject to both a floor and a cap	91
4.5.5	Option for early repayment	91
4.6	Summary: the ideal features of an ITR system	93
	Selected Questions and Exercises	94
	Appendix 4A Derivative Contracts on Interest Rates	96
	<b>PART II MARKET RISKS</b>	<b>103</b>
	Introduction to Part II	105
<b>5</b>	<b>The Variance-Covariance Approach</b>	<b>115</b>
5.1	Introduction	115
5.2	VaR derivation assuming normal return distribution	115
5.2.1	A simplified example	115
5.2.2	Confidence level selection	121
5.2.3	Selection of the time horizon	124
5.3	Sensitivity of portfolio positions to market factors	126
5.3.1	A more general example	126

5.3.2	Portfolio VaR	128
5.3.3	Delta-normal and asset-normal approaches	132
5.4	Mapping of risk positions	133
5.4.1	Mapping of foreign currency bonds	133
5.4.2	Mapping of forward currency positions	135
5.4.3	Mapping of forward rate agreements	139
5.4.4	Mapping of stock positions	140
5.4.5	Mapping of bonds	143
5.5	Summary of the variance-covariance approach and main limitations	143
5.5.1	The normal distribution hypothesis	144
5.5.2	Serial independence and stability of the variance-covariance matrix	147
5.5.3	The linear payoff hypothesis and the delta/gamma approach	148
	Selected Questions and Exercises	151
	Appendix 5A Stockmarket Betas	154
	Appendix 5B Option Sensitivity Coefficients: "Greeks"	157
<b>6</b>	<b>Volatility Estimation Models</b>	<b>163</b>
6.1	Introduction	163
6.2	Volatility estimation based upon historical data: simple moving averages	163
6.3	Volatility estimation based upon historical data: exponential moving averages	167
6.4	Volatility prediction: GARCH models	172
6.5	Volatility prediction: implied volatility	179
6.6	Covariance and correlation estimation	181
	Selected Questions and Exercises	182
<b>7</b>	<b>Simulation Models</b>	<b>185</b>
7.1	Introduction	185
7.2	Historical simulations	189
7.2.1	A first example: the VaR of a single position	189
7.2.2	Estimation of a portfolio's VaR	193
7.2.3	A comparison between historical simulations and the variance-covariance approach	195
7.2.4	Merits and limitations of the historical simulation method	196
7.2.5	The hybrid approach	198
7.2.6	Bootstrapping and path generation	201
7.2.7	Filtered historical simulations	202
7.3	Monte Carlo simulations	205
7.3.1	Estimating the VaR of a single position	207
7.3.2	Estimating portfolio VaR	209
7.3.3	Merits and limitations of Monte Carlo simulations	214
7.4	Stress testing	218
	Selected Questions and Exercises	221

<b>8</b>	<b>Evaluating VaR Models</b>	<b>225</b>
8.1	Introduction	225
8.2	An example of backtesting: a stock portfolio VaR	225
8.3	Alternative VaR model backtesting techniques	232
8.3.1	The unconditional coverage test	233
8.3.2	The conditional coverage test	238
8.3.3	The Lopez test based upon a loss function	241
8.3.4	Tests based upon the entire distribution	243
	Selected Questions and Exercises	244
	Appendix 8A VaR Model Backtesting According to the Basel Committee	246
<b>9</b>	<b>VaR Models: Summary, Applications and Limitations</b>	<b>251</b>
9.1	Introduction	251
9.2	A summary overview of the different models	251
9.3	Applications of VaR models	253
9.3.1	Comparison among different risks	253
9.3.2	Determination of risk taking limits	257
9.3.3	The construction of risk-adjusted performance (RAP) measures	258
9.4	Six "False Shortcomings" of VaR	260
9.4.1	VaR models disregard exceptional events	260
9.4.2	VaR models disregard customer relations	261
9.4.3	VaR models are based upon unrealistic assumptions	261
9.4.4	VaR models generate diverging results	262
9.4.5	VaR models amplify market instability	262
9.4.6	VaR measures "come too late, when damage has already been done"	263
9.5	Two real problems of VaR models	263
9.5.1	The Size of Losses	263
9.5.2	Non-subadditivity	265
9.6	An Alternative Risk Measure: Expected Shortfall (ES)	268
	Selected Questions and Exercises	269
	Appendix 9A Extreme Value Theory	272
	<b>PART III CREDIT RISK</b>	<b>275</b>
	Introduction to Part III	277
<b>10</b>	<b>Credit-Scoring Models</b>	<b>287</b>
10.1	Introduction	287
10.2	Linear discriminant analysis	287
10.2.1	The discriminant function	287
10.2.2	Wilks' Lambda	292
10.2.3	Altman's Z-score	294
10.2.4	From the score to the probability of default	295

10.2.5	The cost of errors	296
10.2.6	The selection of discriminant variables	297
10.2.7	Some hypotheses underlying discriminant analysis	299
10.3	Regression models	299
10.3.1	The linear probabilistic model	299
10.3.2	The logit and probit models	301
10.4	Inductive models	301
10.4.1	Neural networks	301
10.4.2	Genetic algorithms	304
10.5	Uses, limitations and problems of credit-scoring models	307
	Selected Questions and Exercises	309
Appendix 10A	The Estimation of the Gamma Coefficients in Linear Discriminant Analysis	311
<b>11</b>	<b>Capital Market Models</b>	<b>313</b>
11.1	Introduction	313
11.2	The approach based on corporate bond spreads	313
11.2.1	Foreword: continuously compounded interest rates	314
11.2.2	Estimating the one-year probability of default	314
11.2.3	Probabilities of default beyond one year	315
11.2.4	An alternative approach	318
11.2.5	Benefits and limitations of the approach based on corporate bond spreads	320
11.3	Structural models based on stock prices	321
11.3.1	An introduction to structural models	321
11.3.2	Merton's model: general structure	322
11.3.3	Merton's model: the role of contingent claims analysis	324
11.3.4	Merton's model: loan value and equilibrium spread	326
11.3.5	Merton's model: probability of default	328
11.3.6	The term structure of credit spreads and default probabilities	328
11.3.7	Strengths and limitations of Merton's model	330
11.3.8	The KMV model for calculating $V_0$ and $\sigma_V$	332
11.3.9	The KMV approach and the calculation of PD	334
11.3.10	Benefits and limitations of the KMV model	337
	Selected Questions and Exercises	340
Appendix 11A	Calculating the Fair Spread on a Loan	342
Appendix 11B	Real and Risk-Neutral Probabilities of Default	343
<b>12</b>	<b>LGD and Recovery Risk</b>	<b>345</b>
12.1	Introduction	345
12.2	What factors drive recovery rates?	346
12.3	The estimation of recovery rates	347
12.3.1	Market LGD and Default LGD	347
12.3.2	Computing workout LGDs	348
12.4	From past data to LGD estimates	351
12.5	Results from selected empirical studies	353

12.6	Recovery risk	356
12.7	The link between default risk and recovery risk	358
	Selected Questions and Exercises	362
Appendix 12A	The Relationship between PD and RR in the Merton model	364
<b>13</b>	<b>Rating Systems</b>	<b>369</b>
13.1	Introduction	369
13.2	Rating assignment	370
13.2.1	Internal ratings and agency ratings: how do they differ?	370
13.2.2	The assignment of agency ratings	372
13.2.3	Rating assessment in bank internal rating systems	376
13.3	Rating quantification	379
13.3.1	The possible approaches	379
13.3.2	The actuarial approach: marginal, cumulative and annualized default rates	380
13.3.3	The actuarial approach: migration rates	386
13.4	Rating validation	388
13.4.1	Some qualitative criteria	388
13.4.2	Quantitative criteria for validating rating assignments	389
13.4.3	The validation of the rating quantification step	396
	Selected Questions and Exercises	398
<b>14</b>	<b>Portfolio Models</b>	<b>401</b>
14.1	Introduction	401
14.2	Selecting time horizon and confidence level	402
14.2.1	The choice of the risk horizon	402
14.2.2	The choice of the confidence level	405
14.3	The migration approach: <i>CreditMetrics</i> <sup>TM</sup>	406
14.3.1	Estimating risk on a single credit exposure	407
14.3.2	Estimating the risk of a two-exposure portfolio	412
14.3.3	Estimating asset correlation	418
14.3.4	Application to a portfolio of N positions	420
14.3.5	Merits and limitations of the <i>CreditMetrics</i> <sup>TM</sup> model	422
14.4	The structural approach: <i>PortfolioManager</i> <sup>TM</sup>	423
14.5	The macroeconomic approach: <i>CreditPortfolioView</i> <sup>TM</sup>	426
14.5.1	Estimating conditional default probabilities	426
14.5.2	Estimating the conditional transition matrix	427
14.5.3	Merits and limitations of <i>CreditPortfolioView</i> <sup>TM</sup>	428
14.6	The actuarial approach: <i>CreditRisk+</i> <sup>TM</sup>	428
14.6.1	Estimating the probability distribution of defaults	429
14.6.2	The probability distribution of losses	430
14.6.3	The distribution of losses of the entire portfolio	432
14.6.4	Uncertainty about the average default rate and correlations	434
14.6.5	Merits and limitations of <i>CreditRisk+</i> <sup>TM</sup>	438
14.7	A brief comparison of the main models	439

14.8	Some limitations of the credit risk models	442
14.8.1	The treatment of recovery risk	443
14.8.2	The assumption of independence between exposure risk and default risk	443
14.8.3	The assumption of independence between credit risk and market risk	444
14.8.4	The impossibility of backtesting	444
	Selected Questions and Exercises	446
Appendix 14A	Asset correlation versus default correlation	449
<b>15</b>	<b>Some Applications of Credit Risk Measurement Models</b>	<b>451</b>
15.1	Introduction	451
15.2	Loan pricing	451
15.2.1	The cost of the expected loss	452
15.2.2	The cost of economic capital absorbed by unexpected losses	453
15.3	Risk-adjusted performance measurement	457
15.4	Setting limits on risk-taking units	459
15.5	Optimizing the composition of the loan portfolio	461
	Selected Questions and Exercises	462
Appendix 15A	Credit Risk Transfer Tools	464
<b>16</b>	<b>Counterparty Risk on OTC Derivatives</b>	<b>473</b>
16.1	Introduction	473
16.2	Settlement and pre-settlement risk	474
16.3	Estimating pre-settlement risk	474
16.3.1	Two approaches suggested by the Basel Committee (1988)	475
16.3.2	A more sophisticated approach	477
16.3.3	Estimating the loan equivalent exposure of an interest rate swap	479
16.3.4	Amortization and diffusion effect	484
16.3.5	Peak exposure (PE) and average expected exposure (AEE)	489
16.3.6	Further approaches to LEE computation	493
16.3.7	Loan equivalent and Value at Risk: analogies and differences	494
16.4	Risk-adjusted performance measurement	495
16.5	Risk-mitigation tools for pre-settlement risk	496
16.5.1	Bilateral netting agreements	496
16.5.2	Safety margins	500
16.5.3	Recouping and guarantees	501
16.5.4	Credit triggers and early redemption options	501
	Selected Questions and Exercises	504
<b>PART IV</b>	<b>OPERATIONAL RISK</b>	<b>505</b>
	Introduction to Part IV	507
<b>17</b>	<b>Operational Risk: Definition, Measurement and Management</b>	<b>511</b>
17.1	Introduction	511

17.2	OR: How can we define it?	512
17.2.1	OR risk factors	512
17.2.2	Some peculiarities of OR	514
17.3	Measuring OR	517
17.3.1	Identifying the risk factors	518
17.3.2	Mapping business units and estimating risk exposure	518
17.3.3	Estimating the probability of the risky events	519
17.3.4	Estimating the losses	522
17.3.5	Estimating expected loss	524
17.3.6	Estimating unexpected loss	527
17.3.7	Estimating Capital at Risk against OR	529
17.4	Towards an OR management system	533
17.5	Final remarks	535
	Selected Questions and Exercises	537
	Appendix 17A OR measurement and EVT	539
<b>PART V REGULATORY CAPITAL REQUIREMENTS</b>		<b>543</b>
	Introduction to Part V	545
<b>18</b>	<b>The 1988 Capital Accord</b>	<b>547</b>
18.1	Introduction	547
18.2	The capital ratio	549
18.2.1	Regulatory capital (RC)	549
18.2.1.1	Tier 1 capital	549
18.2.1.2	Supplementary capital (Tier 2 and Tier 3)	552
18.2.2	Risk weights ( $w_i$ )	554
18.2.3	Assets included in the capital ratio ( $A_i$ )	555
18.3	Shortcomings of the capital adequacy framework	555
18.3.1	Focus on credit risk only	556
18.3.2	Poor differentiation of risk	556
18.3.3	Limited recognition of the link between maturity and credit risk	556
18.3.4	Disregard for portfolio diversification	556
18.3.5	Limited recognition of risk mitigation tools	559
18.3.6	“Regulatory arbitrage”	559
18.4	Conclusions	559
	Selected Questions and Exercises	559
	Appendix 18A The Basel Committee	563
<b>19</b>	<b>The Capital Requirements for Market Risks</b>	<b>565</b>
19.1	Introduction	565
19.2	Origins and characteristics of capital requirements	565
19.2.1	Origins of the requirements	565
19.2.2	Logic and scope of application	566
19.2.3	The “building blocks” approach	567

19.2.4	Tier 3 Capital	568
19.3	The capital requirement on debt securities	568
19.3.1	The requirement for specific risk	568
19.3.2	The requirement for generic risk	569
19.4	Positions in equity securities: specific and generic requirements	575
19.5	The requirement for positions in foreign currencies	576
19.6	The requirement for commodity positions	578
19.7	The use of internal models	578
19.7.1	Criticism of the Basel Committee proposals	578
19.7.2	The 1995 revised draft	579
19.7.3	The final amendment of January 1996	581
19.7.4	Advantages and limitations of the internal model approach	582
19.7.5	The pre-commitment approach	583
	Selected Questions and Exercises	585
Appendix 19A	Capital Requirements Related to Settlement, Counterparty and Concentration Risks	588
<b>20</b>	<b>The New Basel Accord</b>	<b>591</b>
20.1	Introduction	591
20.2	Goals and Contents of the Reform	591
20.3	Pillar One: The Standard Approach to Credit Risk	593
20.3.1	Risk Weighting	593
20.3.2	Collateral and Guarantees	596
20.4	The Internal Ratings-based Approach	597
20.4.1	Risk Factors	597
20.4.2	Minimum Requirements of the Internal Ratings System	600
20.4.3	From the Rating System to the Minimum Capital Requirements	603
20.5	Pillar Two: A New Role for Supervisory Authorities	612
20.6	Pillar Three: Market Discipline	614
20.6.1	The Rationale Underlying Market Discipline	614
20.6.2	The Reporting Obligations	614
20.6.3	Other Necessary Conditions for Market Discipline	615
20.7	Pros and Cons of Basel II	616
20.8	The Impact of Basel II	619
20.8.1	The Impact on First Implementation	619
20.8.2	The Dynamic Impact: Procyclicality	623
	Selected Questions and Exercises	630
<b>21</b>	<b>Capital Requirements on Operational Risk</b>	<b>633</b>
21.1	Introduction	633
21.2	The capital requirement on operational risk	633
21.2.1	The Basic Indicator Approach	634
21.2.2	The Standardized Approach	635
21.2.3	The requirements for adopting the standardized approach	638
21.2.4	Advanced measurement approaches	638

21.2.5	The requirements for adopting advanced approaches	639
21.2.6	The role of the second and third pillars	644
21.2.7	The role of insurance coverage	644
21.3	Weaknesses of the 2004 Accord	645
21.4	Final remarks	647
	Selected Questions and Exercises	647
 <b>PART VI CAPITAL MANAGEMENT AND VALUE CREATION</b>		<b>651</b>
	Introduction to Part VI	653
 <b>22 Capital Management</b>		<b>657</b>
22.1	Introduction	657
22.2	Defining and measuring capital	658
22.2.1	The definition of capital	658
22.2.2	The relationship between economic capital and available capital	661
22.2.3	Calculating a bank's economic capital	663
22.2.4	The relationship between economic capital and regulatory capital	667
22.2.5	The constraints imposed by regulatory capital: implications on pricing and performance measurement	671
22.2.6	The determinants of capitalization	674
22.3	Optimizing regulatory capital	675
22.3.1	Technical features of the different regulatory capital instruments	676
22.3.2	The actual use of the various instruments included within regulatory capital	680
22.4	Other instruments not included within regulatory capital	685
22.4.1	Insurance capital	685
22.4.2	Contingent capital	687
	Selected Questions and Exercises	691
 <b>23 Capital Allocation</b>		<b>693</b>
23.1	Introduction	693
23.2	Measuring capital for the individual business units	694
23.2.1	The "benchmark capital" approach	695
23.2.2	The model-based approach	695
23.2.3	The Earnings-at-Risk (EaR) approach	697
23.3	The relationship between allocated capital and total capital	702
23.3.1	The concept of diversified capital	702
23.3.2	Calculating diversified capital	703
23.3.3	Calculating the correlations used in determining diversified capital	710
23.4	Capital allocated and capital absorbed	712
23.5	Calculating risk-adjusted performance	715

23.6	Optimizing the allocation of capital	722
23.6.1	A model for optimal capital allocation	722
23.6.2	A more realistic model	724
23.7	The organizational aspects of the capital allocation process	726
	Selected Questions and Exercises	728
Appendix 23A	The Correlation Approach	730
Appendix 23B	The Virtual Nature of Capital Allocation	731
<b>24</b>	<b>Cost of Capital and Value Creation</b>	<b>735</b>
24.1	Introduction	735
24.2	The link between Risk Management and Capital Budgeting	735
24.3	Capital Budgeting in Banks and in Non-Financial Enterprises	736
24.4	Estimating the Cost of Capital	739
24.4.1	The method based on the dividend discount model	739
24.4.2	The method based on the price/earnings ratio	741
24.4.3	The method based on the Capital Asset Pricing Model (CAPM)	742
24.4.4	Caveats	744
24.5	Some empirical Examples	745
24.6	Value Creation and RAROC	750
24.7	Value Creation and EVA	753
24.8	Conclusions	756
	Selected Questions and Exercises	757
	<b>Bibliography</b>	<b>759</b>
	<b>Index</b>	<b>771</b>
